IPM DOCTRINE (INTRO PAGES)

Pre-filled from your standard IPM. Edit if this client needs different wording.

1. MODEL OVERVIEW

Our Integrated Pricing Model (IPM) is a unified pricing system developed to simplify product development, production, and fulfillment for all clients. This model ensures consistency in pricing across product categories, strict quality control across all

2. PRICING STRUCTURE – DELIVERY MODE

Packaging materials required for production are sourced externally and imported. Clients may select one of two import methods: Air Import (2–3 weeks) offers a faster procurement cycle allowing quicker production turnaround, at higher logistics cost.

2. PRICING STRUCTURE – BATCH SCALING

Final unit pricing is also influenced by total production volume. Smaller batch sizes result in higher unit cost; larger batch sizes result in lower unit cost due to production efficiency and material optimization. This ensures fair distribution of production

3. PRODUCTION & FULFILMENT PRINCIPLE

Once packaging materials are imported, production begins immediately upon arrival. Products are manufactured fresh per batch, and filling and sealing are completed within controlled production cycles before finished goods are prepared

4. WHAT EACH UNIT PRICE INCLUDES

Every quoted unit price under this model is fully inclusive of: product formulation and manufacturing, raw material sourcing and processing, packaging (bottles, tubes, jars, as applicable), label print and application, filling and sealing of finished units,

PRODUCTS

Add each product with its batch tiers and pricing. Tiers default to 100 / 500 / 1,000 – edit or add as needed.
